Education at a Glance: OECD Indicators - 2003 Edition (Print Paperback)

A thorough comparative analysis of education system performance with quantitative indicators reflecting the current state of education internationally.

Across OECD and other countries, governments are seeking more effective approaches to meeting the rising demand for education with limited resources. In the 2003 edition of Education at a Glance, cutting-edge OECD indicators permit comparing key facets of education system performance between and within countries.

The focus this year is on the factors shaping learning outcome quality and education investment profitability.

Through the World Education Indicators program, many non-member countries also contributed to this new education survey, extending its coverage to almost two thirds of world population.

A thematic organisation enhances the volume's usefulness.

OECD Code 962003061P1
